

APPLIED VISION
ASSOCIATION

30th Xmas Meeting
Monday 15th December 2025

Vision Sciences Building
Aston University, Birmingham UK

Programme and Schedule

#AVA2025

#AVA2025Xmas

theava.net

Key Information

We look forward to welcoming you to this year's Xmas AVA Meeting at Aston University.

You'll find all the key details on this page of the programme, and then the schedule of talks and poster titles follows on from the following page.

How do I get there?

We are hosting the conference in the Vision Sciences Building at Aston University which can be found at the Google Map link below, or the what three words: ///tube.plays.march

<https://maps.app.goo.gl/zpHSw96LUym9Z8a97>

We will be using the Main Entrance for the Eye Clinic.

I'm attending online – what should I do?

If you register for online attendance we will email you the Teams link for the day. Please remember to stay muted and off-camera whilst talks are taking place.

If I have a question, who do I speak to?

You can email Sam (s.strong2@aston.ac.uk) or speak to one of our dedicated Organising Committee in person (they have sparkly stars on their name badges).

We hope you enjoy the conference 😊

- The Organising Committee
 - Samantha Strong (Aston University)
 - Holly Brown (University of Leeds)
 - Howard Collins (Aston University)
 - Daisy Kynman-Sprinks (Aston University)
 - Kirsten Mason (Aston University)
 - Waheeda Hawa (Aston University)

Schedule & Talks

Time	Session Details
10.00-10.45	Arrival/ Registration at Vision Sciences Building, Aston University
10.45-11.45 (GMT)	10.45 – Introduction / Housekeeping 11.00-11.45 Keynote - Title TBD <i>Denise Voon, College of Optometrists</i>
11.45-12.00	Tea/ coffee break
12.00-13.00 (GMT)	12.00-12.15 To see or not to see: camouflage and human processes of detection <i>Jac Billington, University of Leeds</i> 12.15-12.30 Connecting the dots - Recognition of artificial and natural shapes relies on representing points of high information <i>Gunnar Schmidtmann, University of Plymouth</i> 12.30-12.45 The relationship between resting state peak alpha frequency and position perception <i>Louise O'Hare, Nottingham Trent University</i> 12.45-13.00 Objective Measurement of Visual Behavior with Wearable Light Logging <i>Sebastian Golczyk, Technical University of Munich</i>
13:00-13:30 (GMT)	Poster Session
13.30-14.15	Lunch (posters continued)

14.15-15.15 (GMT)	14.15-14.30 The influence of simulated cataracts on speed perception isn't necessarily 'black and white' <i>Samantha Strong, Aston University</i> 14.30-14.45 Exploring the relationship between central visual field loss, activity levels, and cognitive function <i>Holly Brown, University of Leeds</i> 14.45-15.00 Opponent flicker fusion: A behavioural task to probe cone-opponent mechanisms <i>Rio Coleman, University of Southampton</i> 15.00-15.15 Effects of visual training on perception and GABA in the early visual cortex of amblyopes <i>Juju Fars, OxCIN - NDCN - University of Oxford</i>
15.15-15.30	Tea/ coffee break
15.30-16.30 (GMT)	15.30-15.45 The reorienting of attention around a head movement <i>Szonya Durant, Royal Holloway, University of London</i> 15.45-16.00 Hidden persistence: how masked images accumulate in a subliminal sensory buffer store <i>Damian Pang, University of Oxford</i> 16.00-16.15 Conjugate and sejugate visual dimensions <i>John Mollon, University of Cambridge</i> 16.15-16.30 Mary's room revisited: What does omni-AI learn on seeing colour after being trained on grey-scale? <i>Tim Meese, Aston University</i>
16.30 -17.15 (GMT)	16.30-17.15 Keynote – Marr Medal Experience Before Inference <i>Paul Linton, Columbia University</i>
17:15-18:15 (GMT)	AVA Networking (wine reception)

Poster Titles

All titles below are in alphabetical order by lead author surname.

The in and out of top-down inhibition

Aline Bompas, CUBRIC – School of Psychology, Cardiff University

Eye movement analysis as an objective measure of functions predominantly processed by the magnocellular system

Ilze Ceple, University of Latvia

Binocular and monocular blur affect the planning and online control of prehension movements

Rachel O Coats, University of Leeds

A new method for investigating interactive visual search

Emma Deverill, University of Southampton

Easy does it: selection during interactive search tasks is biased towards objects that can be examined easily

Haden Dewis, University of Southampton

Correcting the View: Calculating MRI-Compatible Lens Prescriptions

Waheeda Hawa, Aston University

Sensory cue integration differences for heading vs. scene-relative movement tasks

Joshua D Haynes, University of Manchester

Developmental changes in emotion recognition across adolescence

Karen Hoang, Queen Mary University of London

Assessing the prevalence of depression and anxiety in patients diagnosed with neovascular age-related macular degeneration; the NAYMA study

Cheon Hoi Koo, 1Hull-York Medical School, University of York

Reduced intensity and consistency of participant-constructed emotional expressions in developmental prosopagnosia

Emma J Kersey, Queen Mary University of London

Benchmarking performance metrics for continuous psychophysics tasks

Aleksandrs Koselevs, University of Southampton

Simulated visual impairment reduces accuracy in facial emotion recognition

Chloe Lam, University of Southampton

Beyond the binary: Eye-tracking evidence of imprecise visual awareness in the Multiple Object Awareness paradigm

Prasad Mane, University of Southampton

Perception of rendering stalls in dynamic 3D scenes

Emmanuelle Rodrigues Nunes, University of Reading

Continuous psychophysics in the clinic: a pilot study in patients with retinal disease

Veronica Pisu, University of Southampton

Two tritanopes

Kalina Poydovska, University of Cambridge

The influence of attention on body size misperception

Amy O Smith, Nottingham Trent University

Software-based perimetry using FDP and ZEST

Renārs Trukša, University of Latvia

Computer vision face detectors predict the strength of human face pareidolia

Saivydas Villani, University of Southampton

Obstacle presence disrupts kinematic markers of prehension when vision is artificially degraded

Niamh Wragg, University of Leeds
