

- How to use Git gui(s) for
- local and remote repositories
 - version control

Open Science Ambassadors 2024 - FMRIIB Graduate Course

Presenter: Juju Fars

WHAT WE WILL TALK ABOUT

- Introduction to Github Desktop and Git gui
- Objectives and locations
- How to use Git - an easier way
 - fork the repository (if not done already)
 - Clone the repository
 - review the local content
 - Address issues (Licence, task code, task data, repository)
 - review changes and push
- Create a merge request on GitHub
- Raising an issue
- Using the Wiki
- Conclusion

GITHUB DESKTOP

- Pros
 - Easy to associate with GitHub
 - Lots of documentation
 - Does not require any pre-existing knowledge of Git (or not a lot)
- Cons
 - Only one account
 - Does not natively support GitLab

GIT GUI

- Pros
 - Natively in Git Bash
 - Same functionalities as Git (e.g. multiple accounts)
- Cons
 - Not very clear
 - Same functionalities as Git (e.g. same lingo)

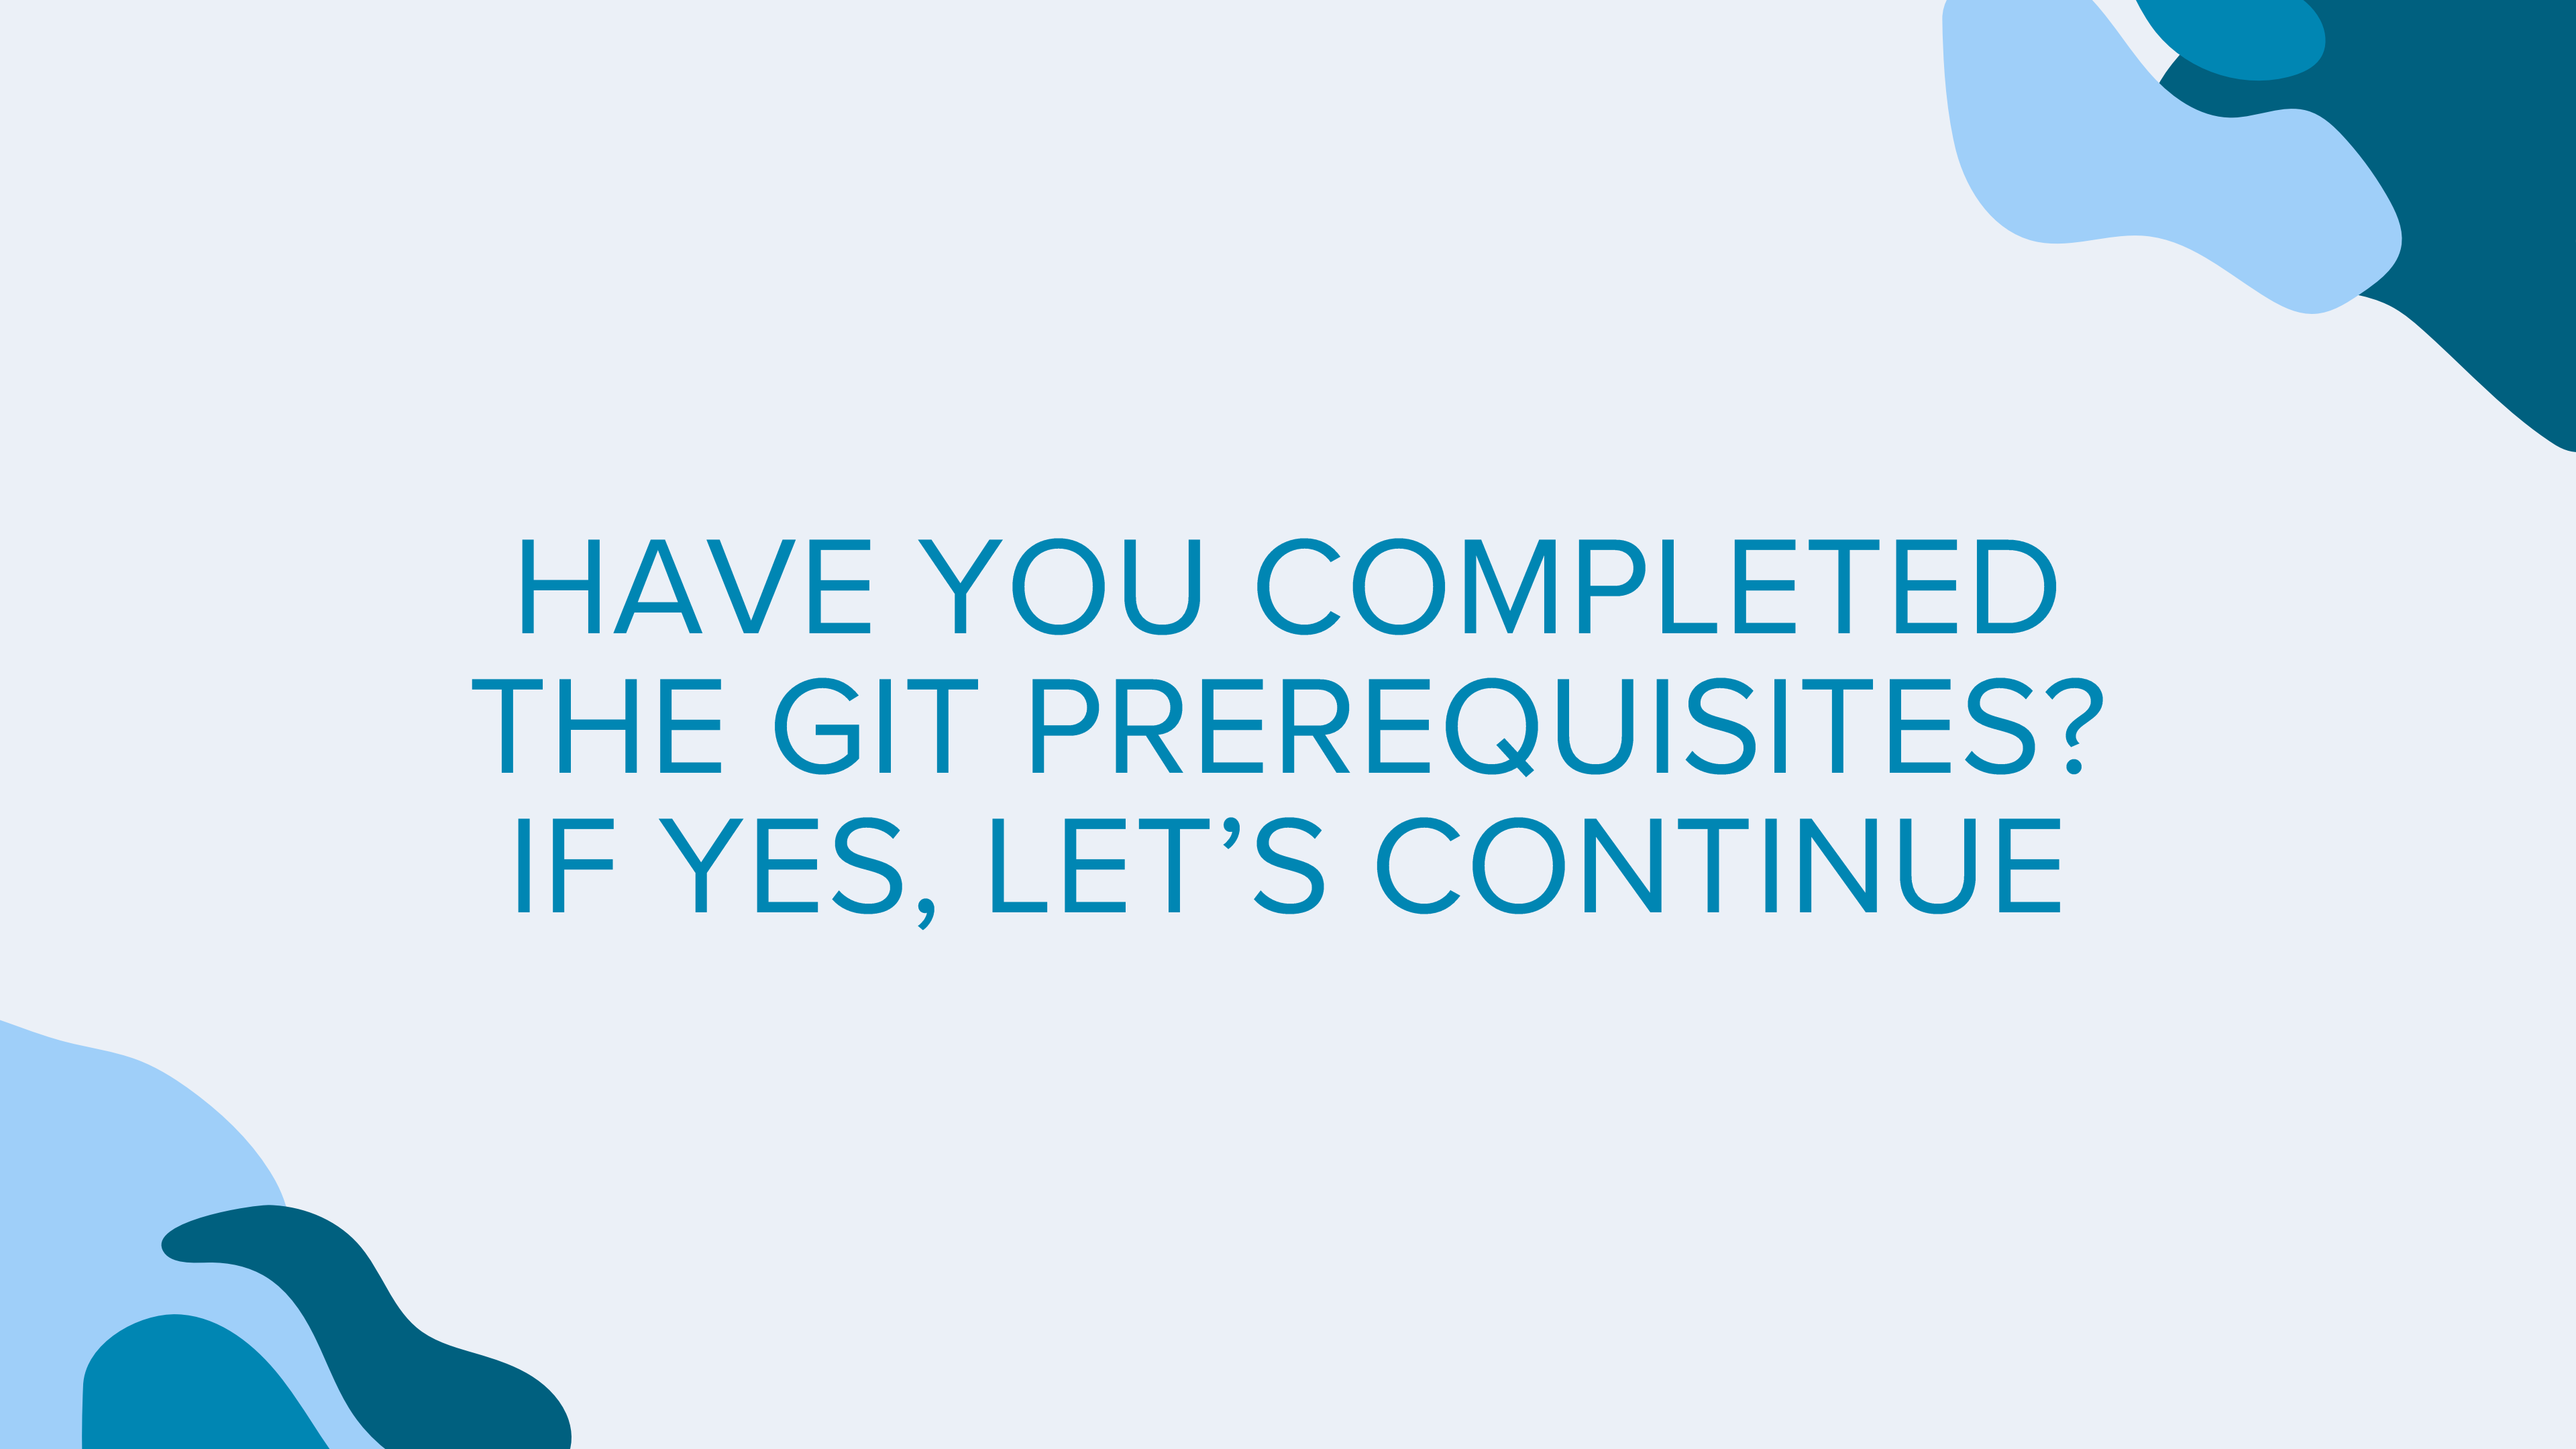

OBJECTIVES

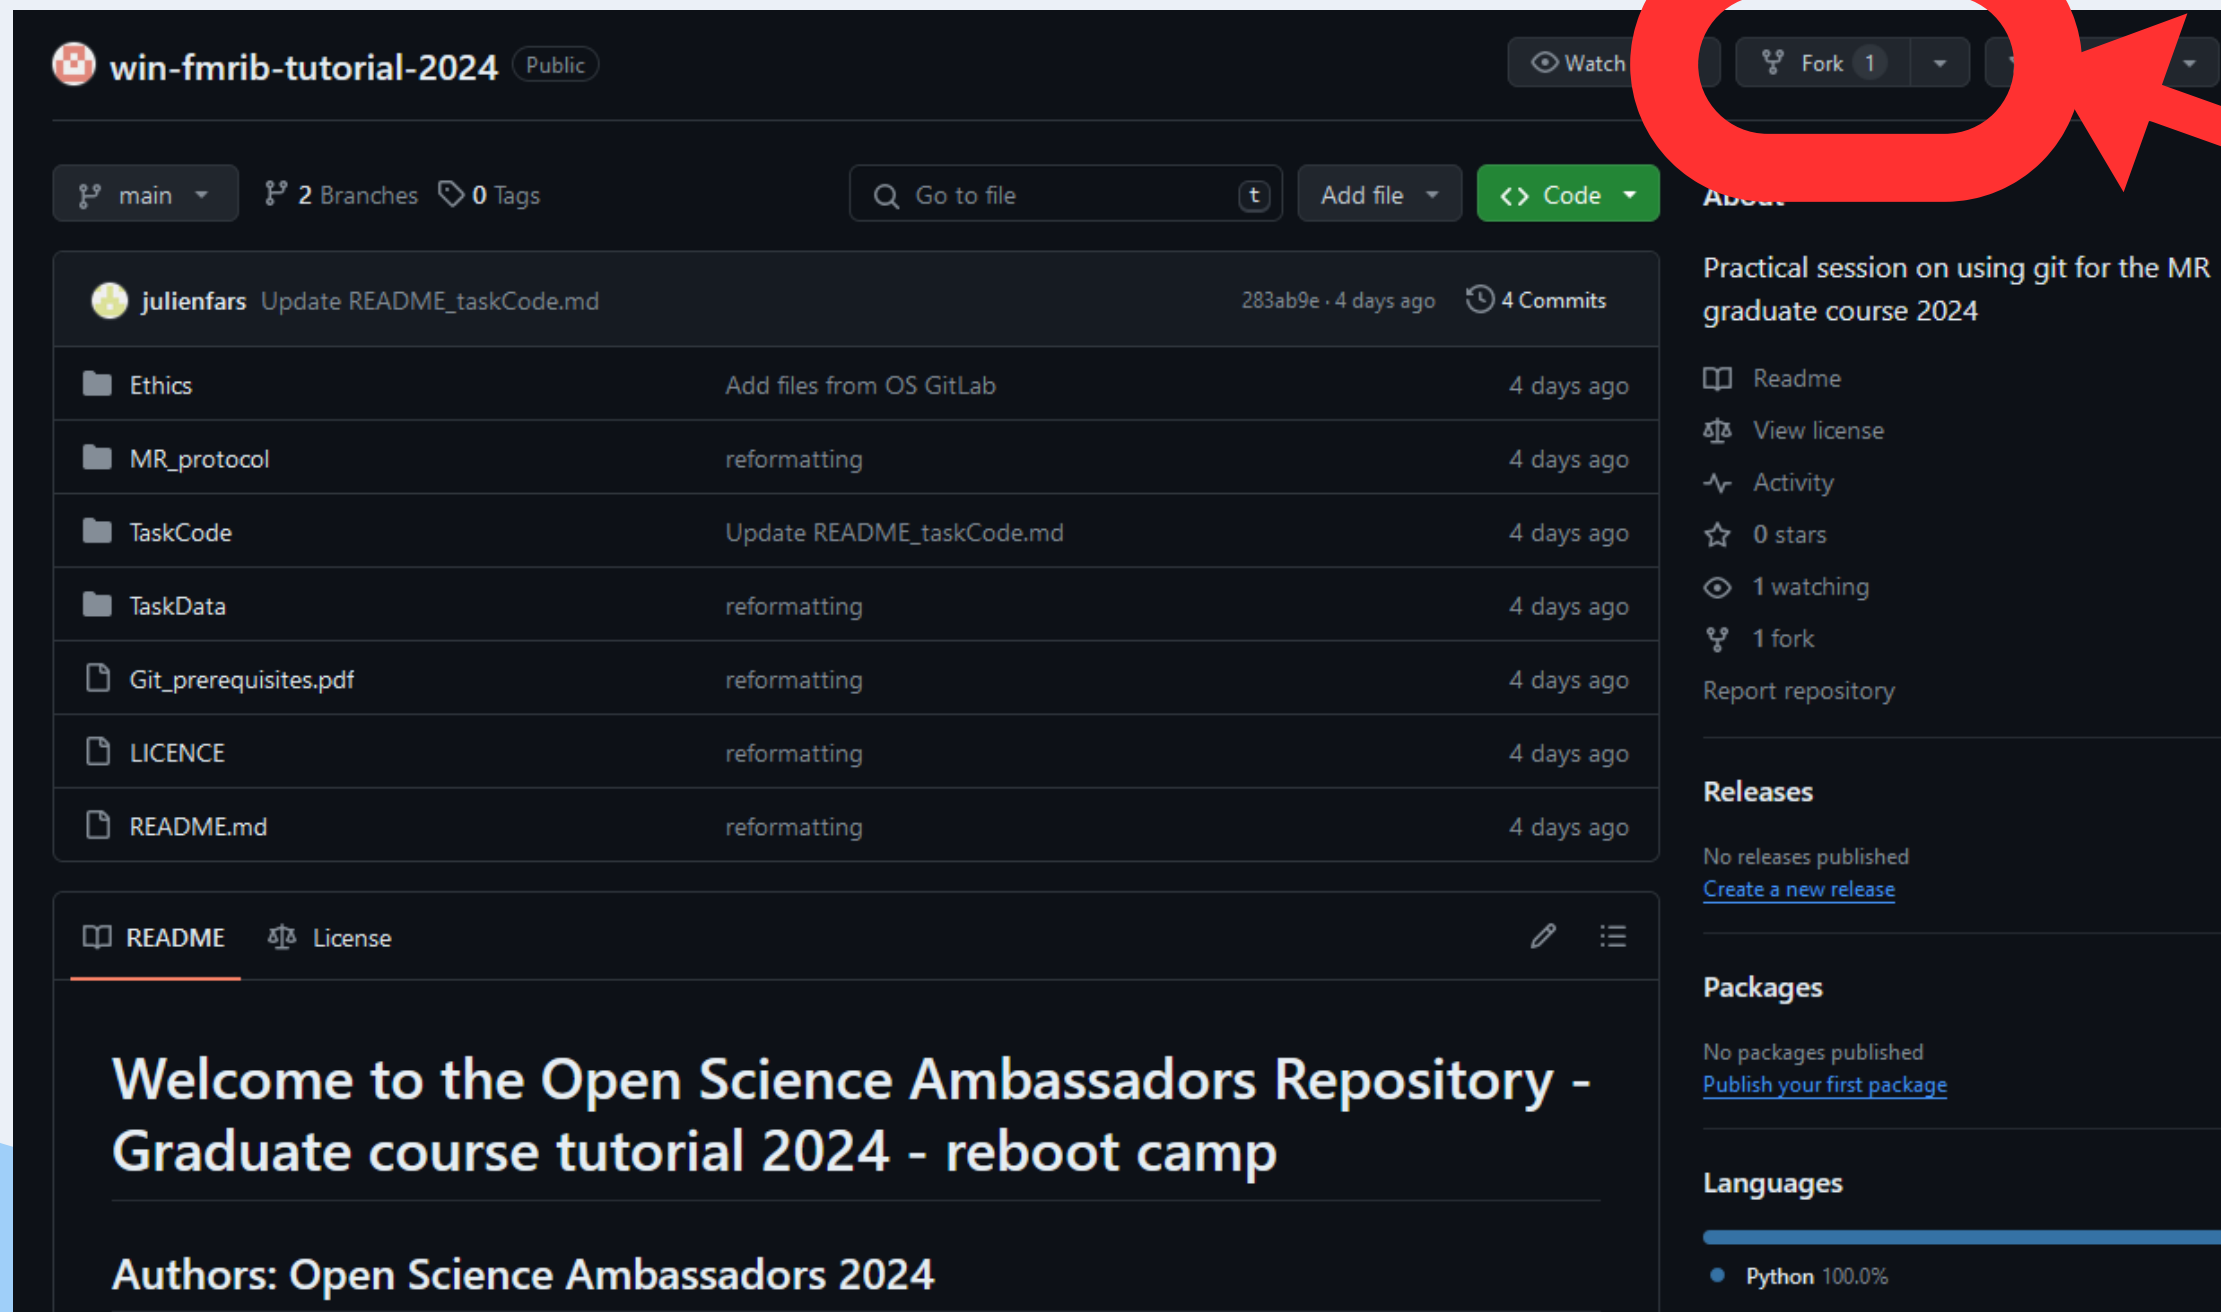

- Learn how to use GitHub Desktop and Git gui
- If not comfortable with the terminal OR if you are a visual person = settle for one of the apps

LOCATION

You must find this first: <https://github.com/lilianAweber/win-fmrib-tutorial-2024>

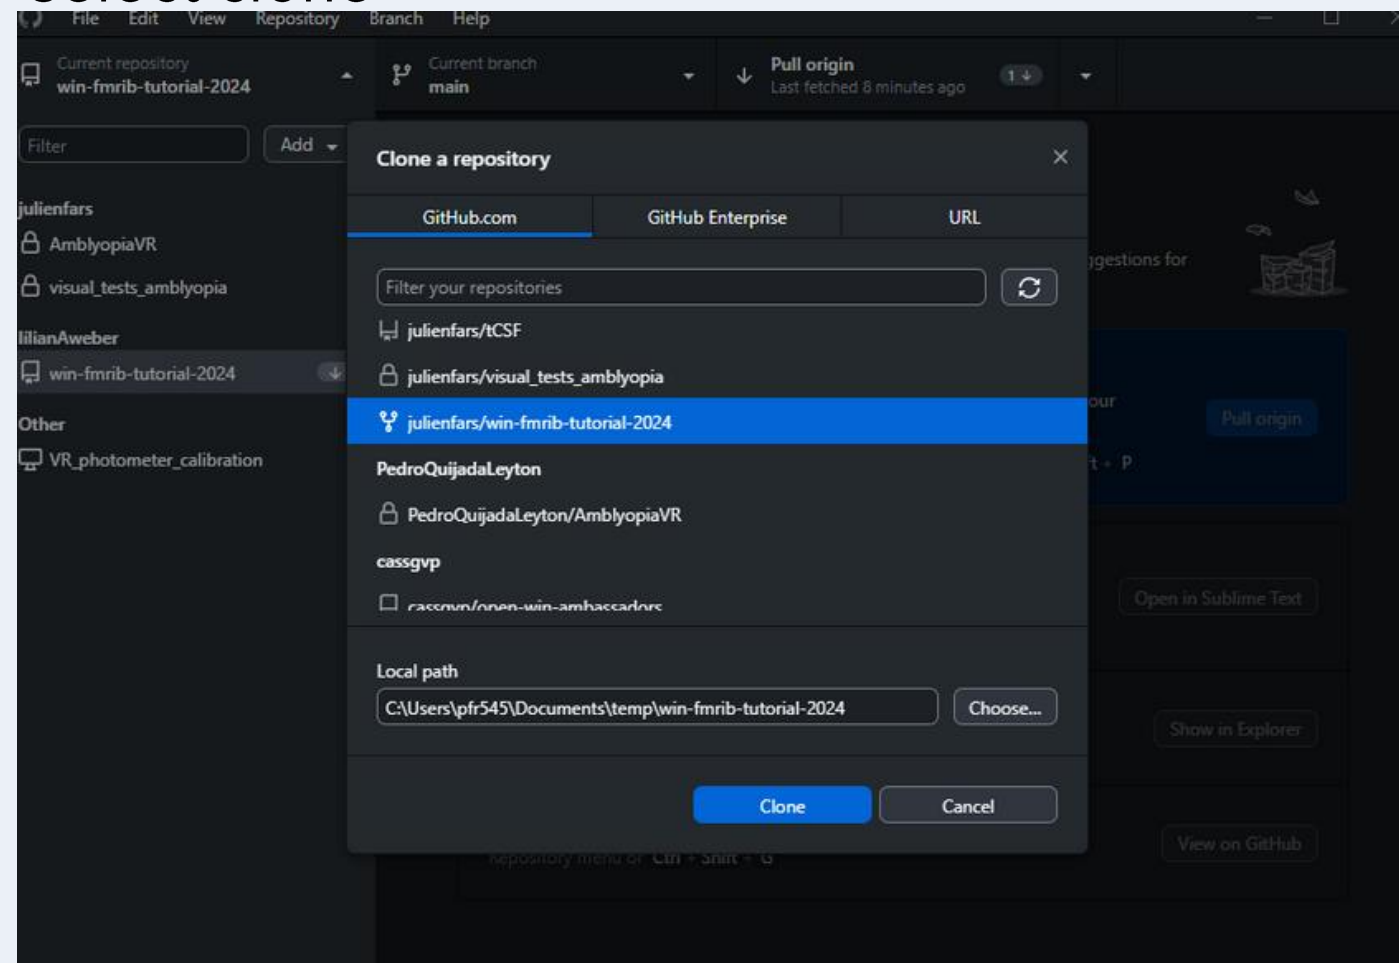

HAVE YOU COMPLETED
THE GIT PREREQUISITES?
IF YES, LET'S CONTINUE

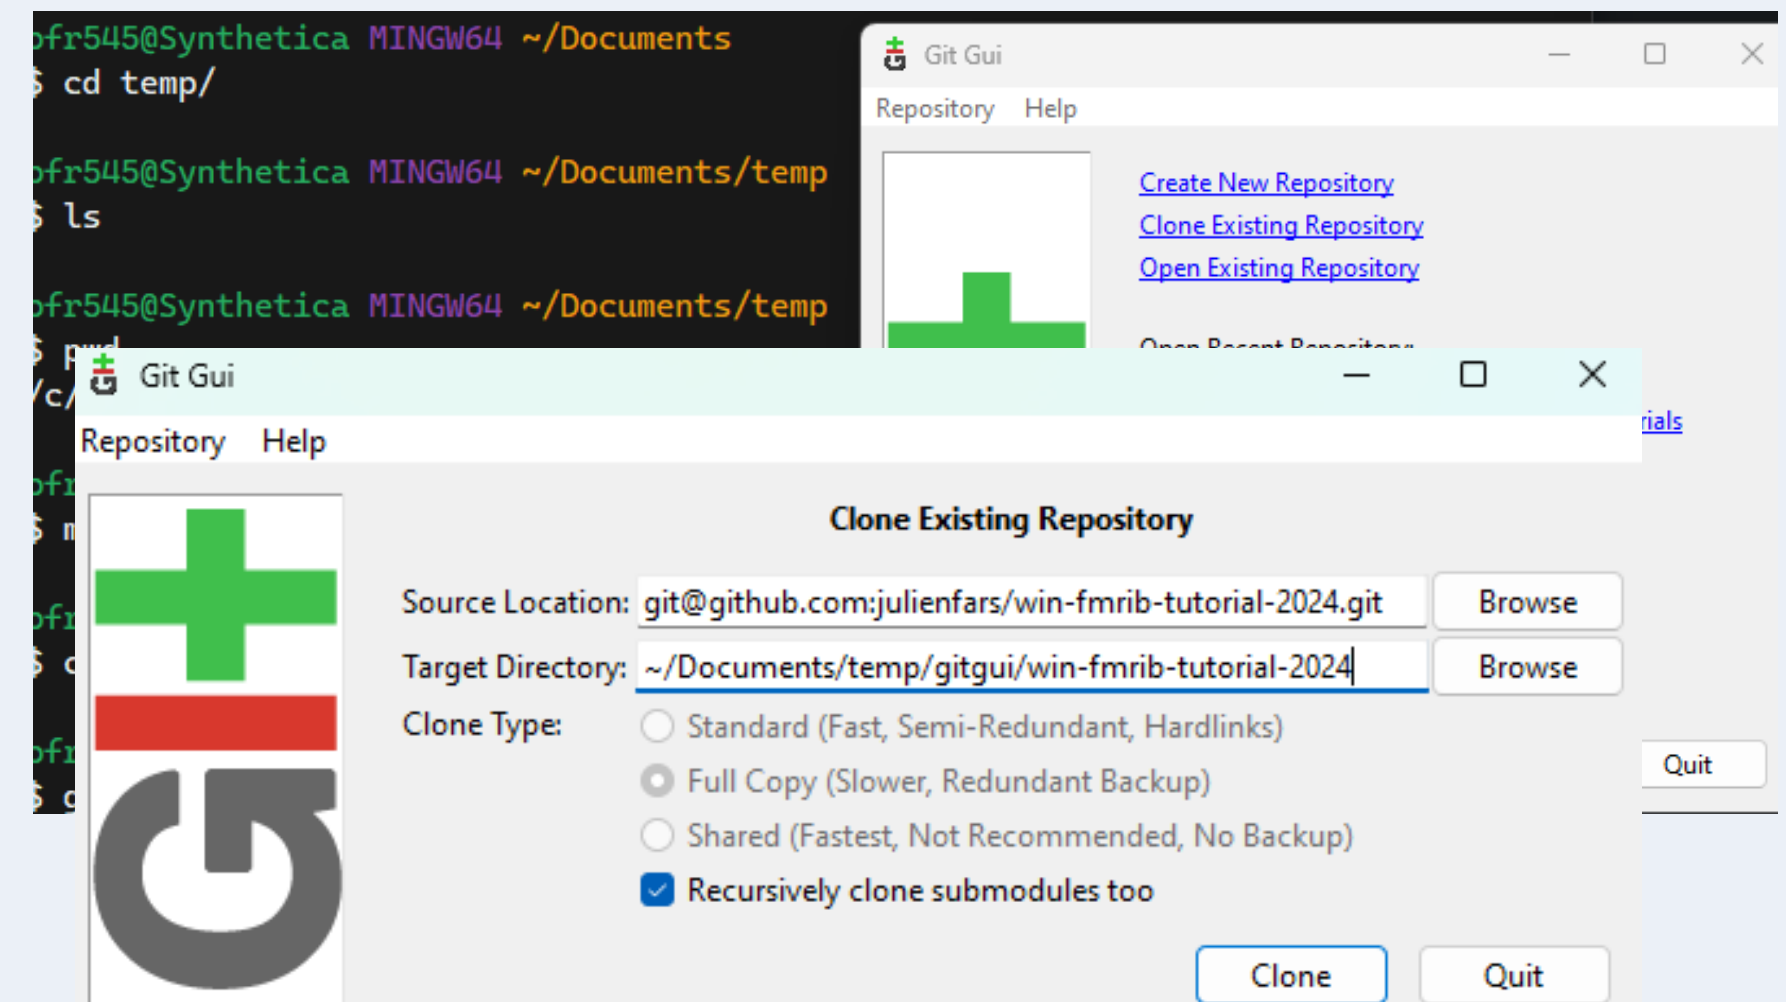

First you must fork the repository, to make it available on your Github account

- open github desktop and go to file -> clone a directory
- select the directory you forked and then indicate in the local path where you want to clone your repository
- select clone

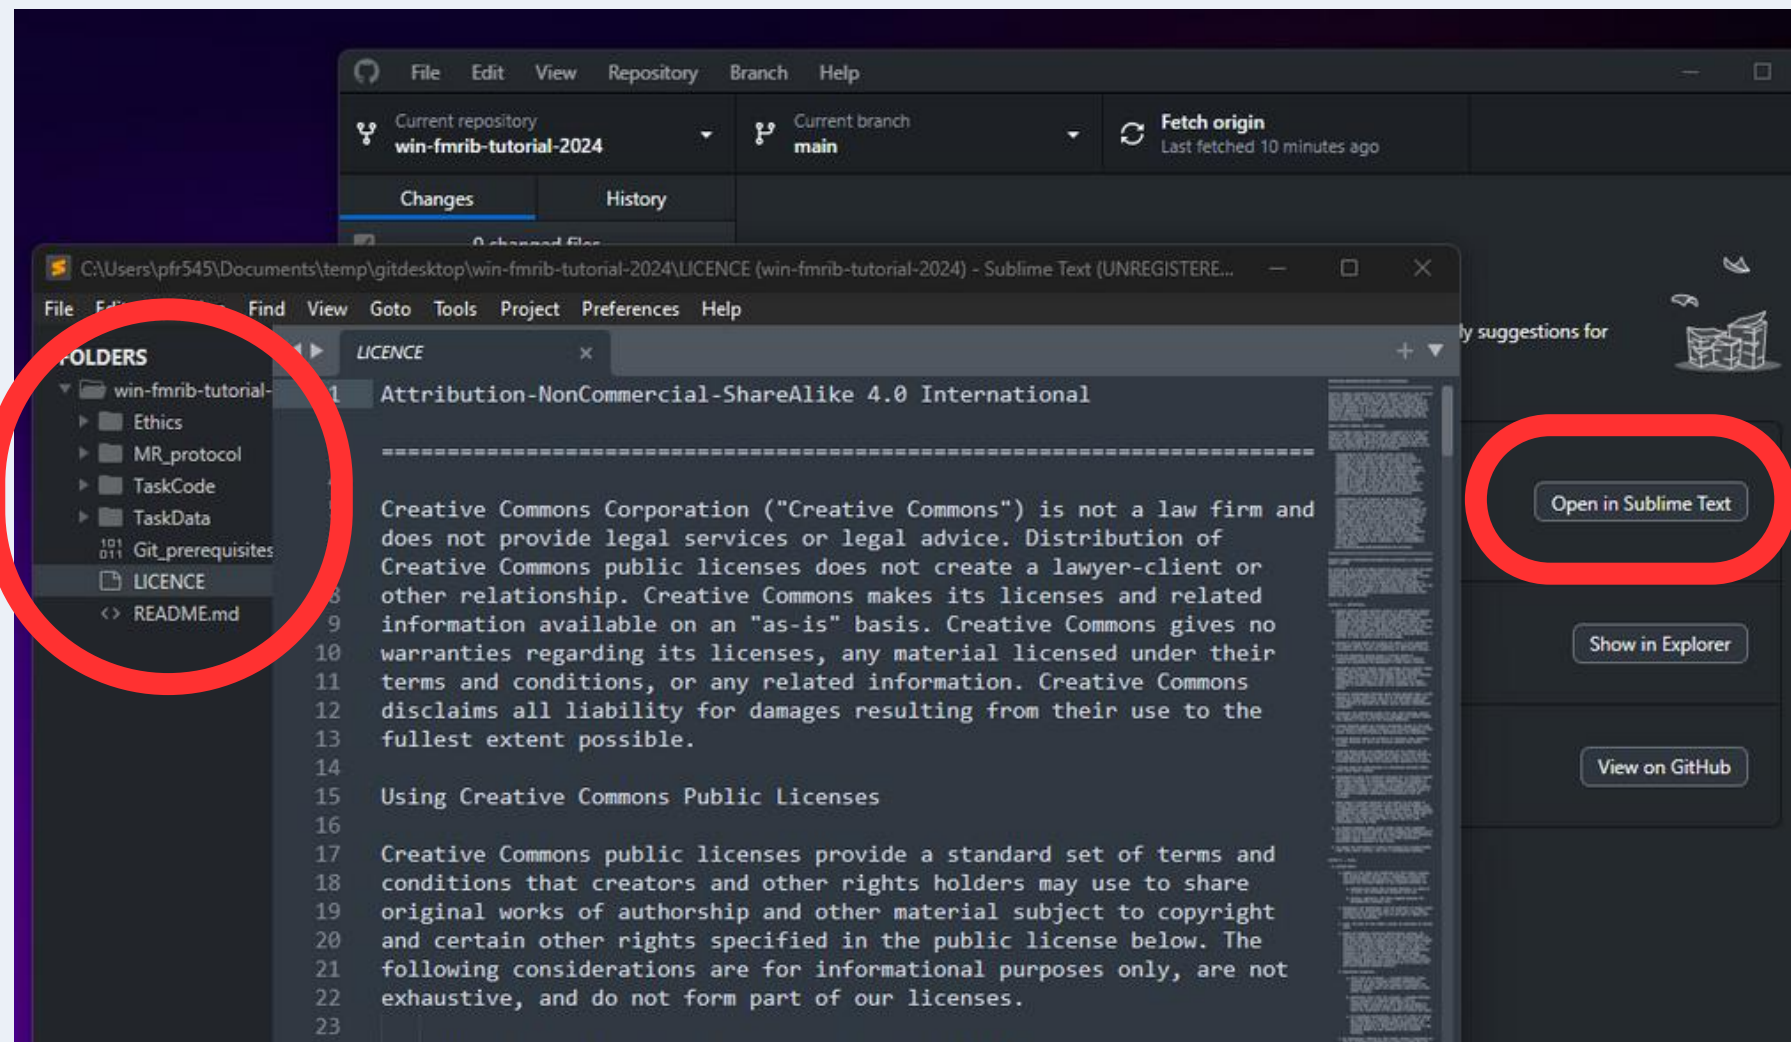

- open git terminal and cd to the directory you want to clone your repository in
- then type: *git gui*
- choose clone repository

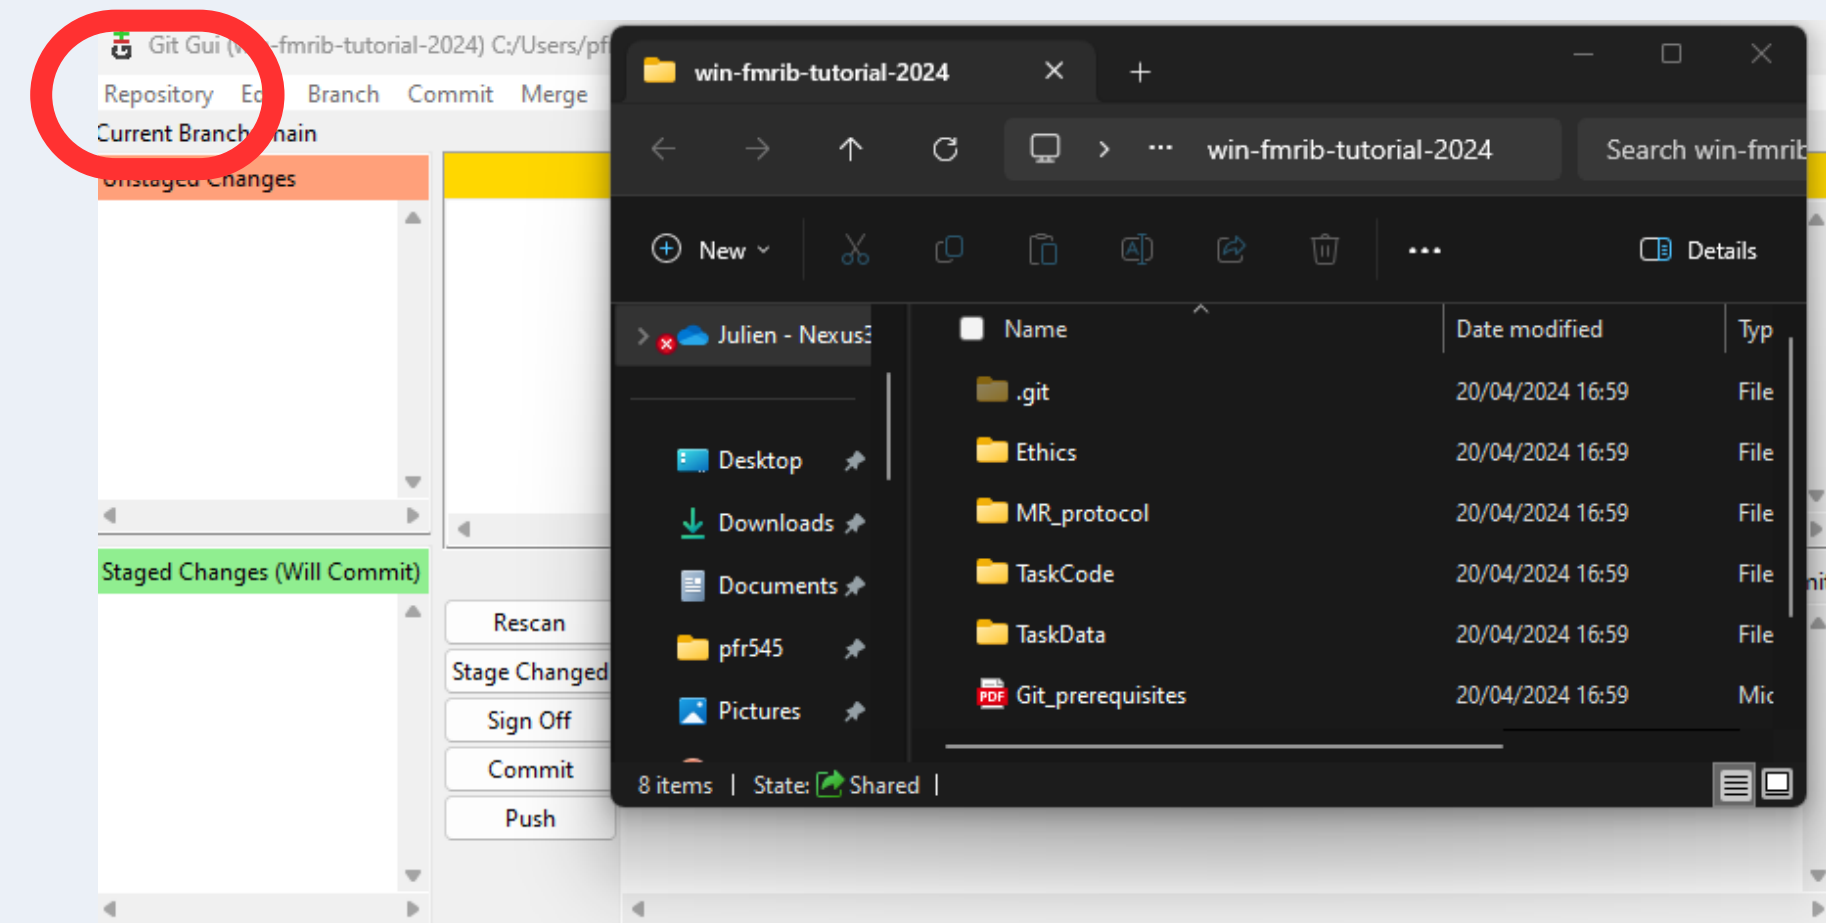

Then type the source location as given by GitHub and the target directory you want

- click on Open in Sublime Text (depending on your text editor)
- explore the files (careful - excel files not supported)

- go to repository -> explore working copy
- manually explore the files using your text editor or other relevant apps (e.g. excel for data tables)

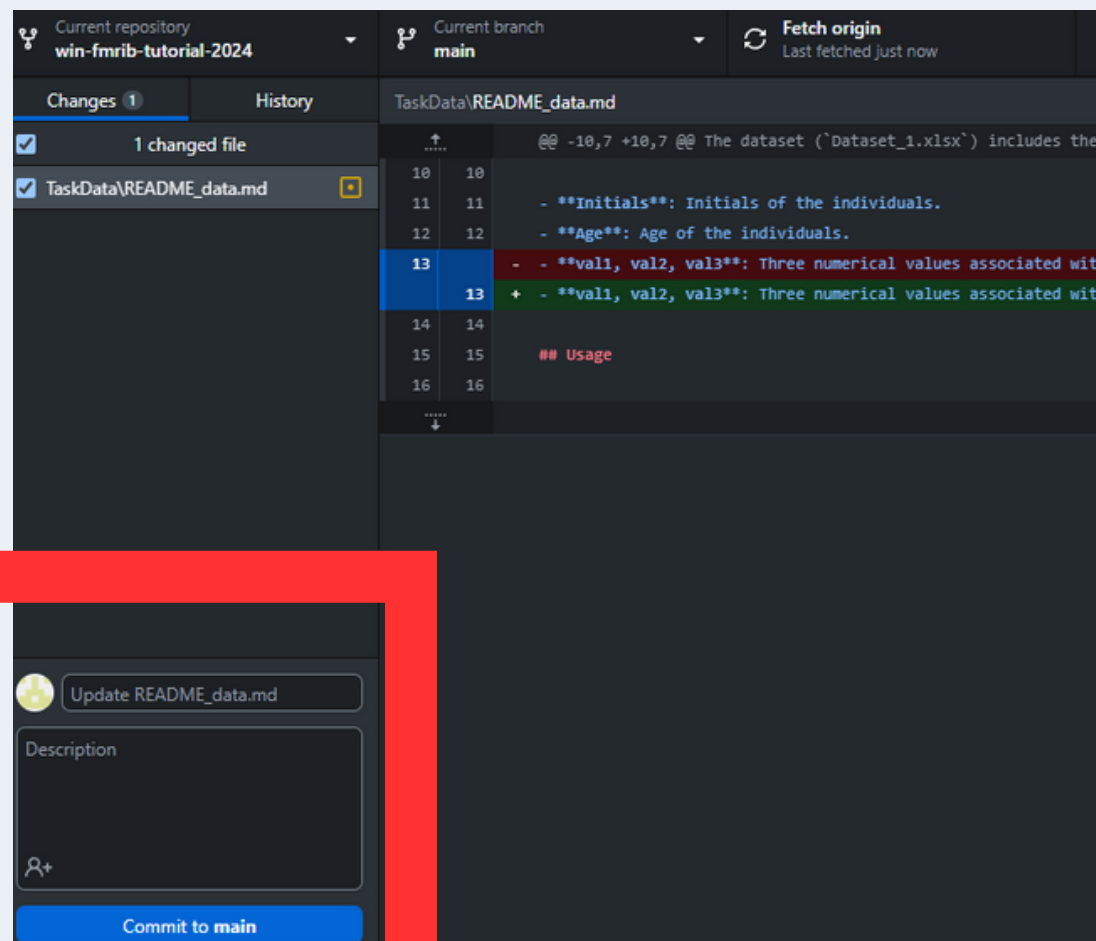

ADDRESS ISSUES

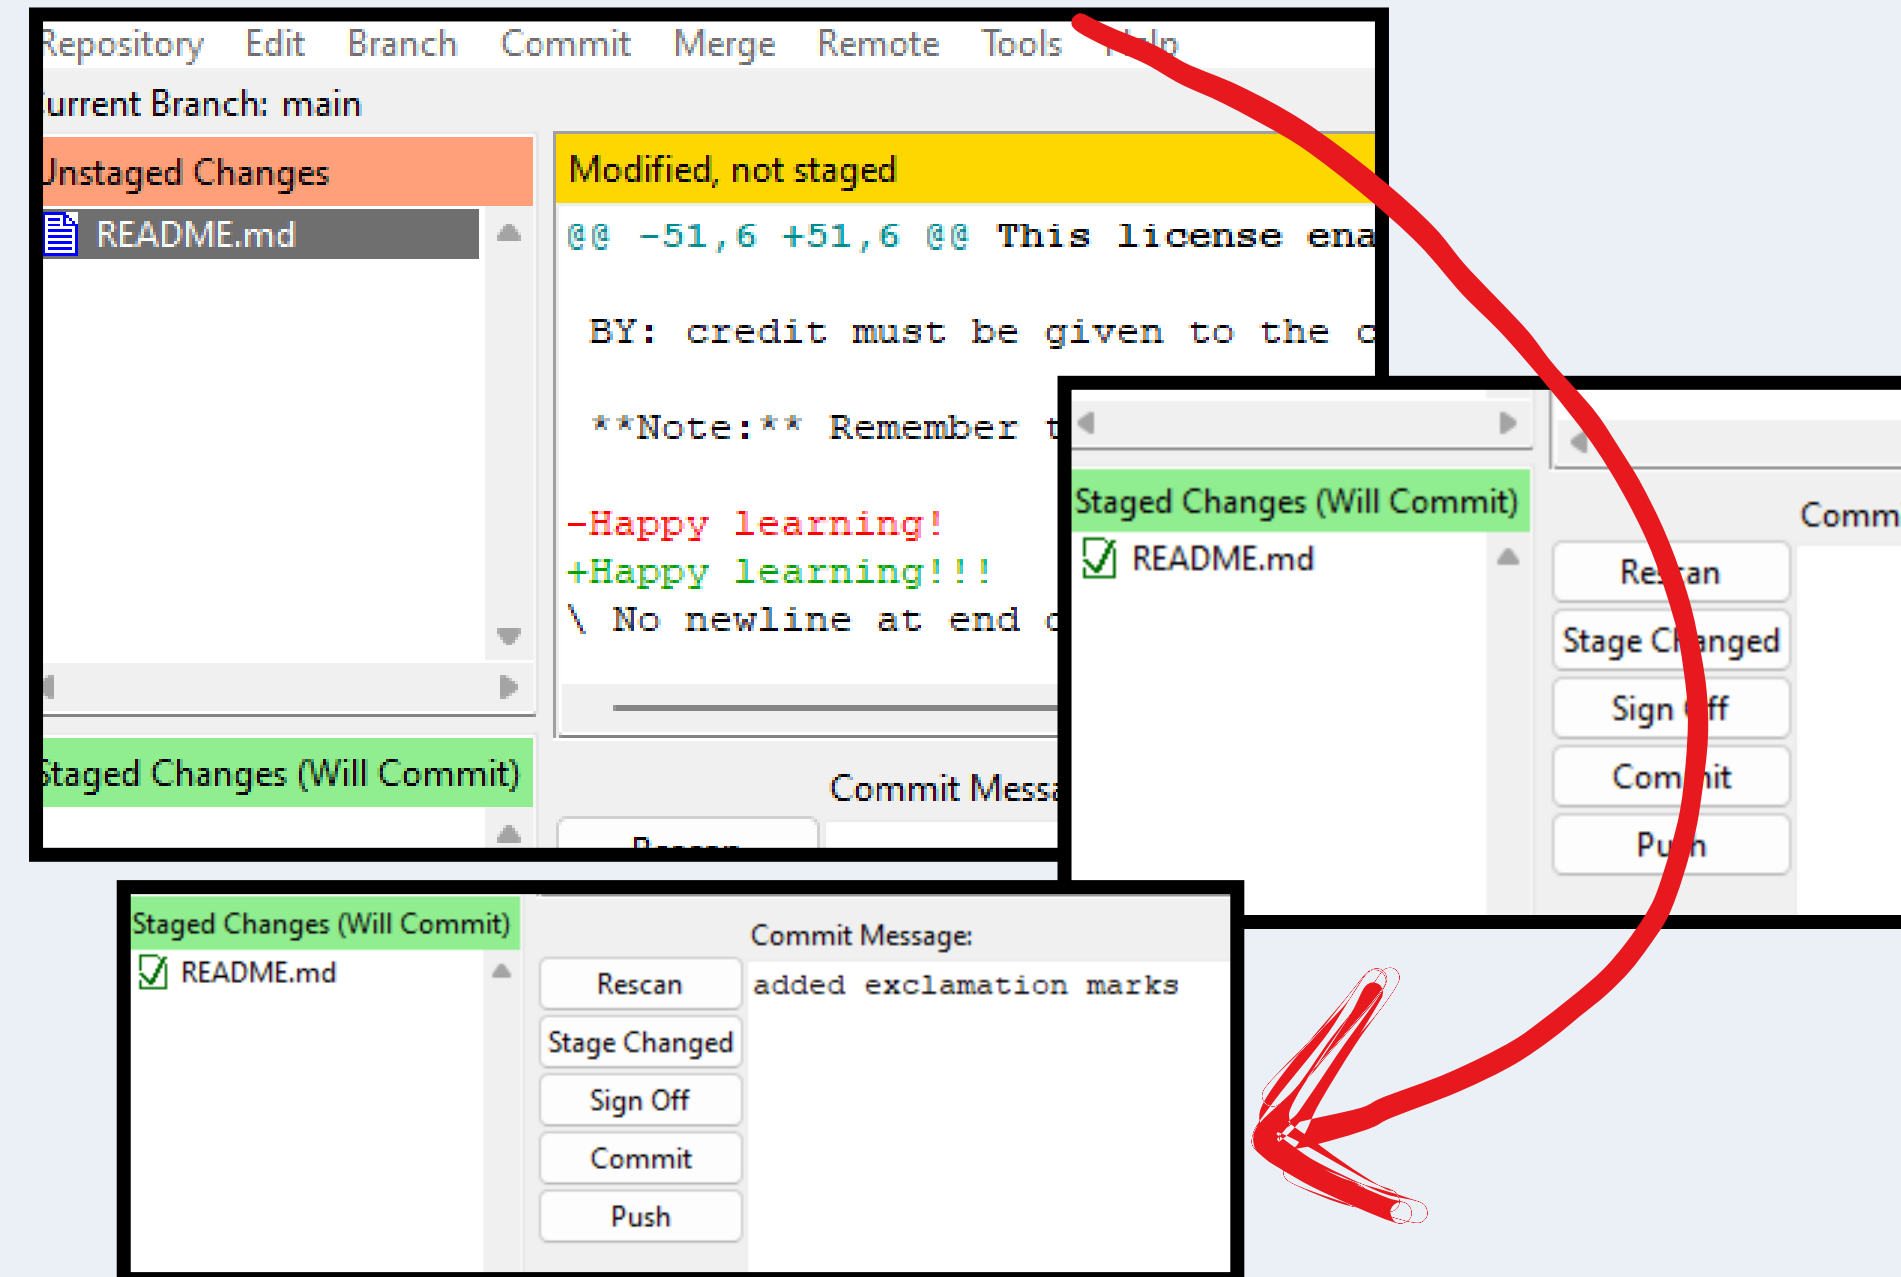

1. License: Look at the licence file, is this licence file included in the GitHub roaster? Is this the appropriate one?
- 2.Task code: is there something missing from the task code? From the associated file?
- 3.Task data: what is the issue about this task data? Should you change something?
- 4.Whole repository; What is present in this repository and should not be here (on GitHub)?

- after reviewing your changes, go on the left bottom corner and add a short description of your changes
- then press commit
- Finally, press push changes in the main interface to change commit the changes on the online repository

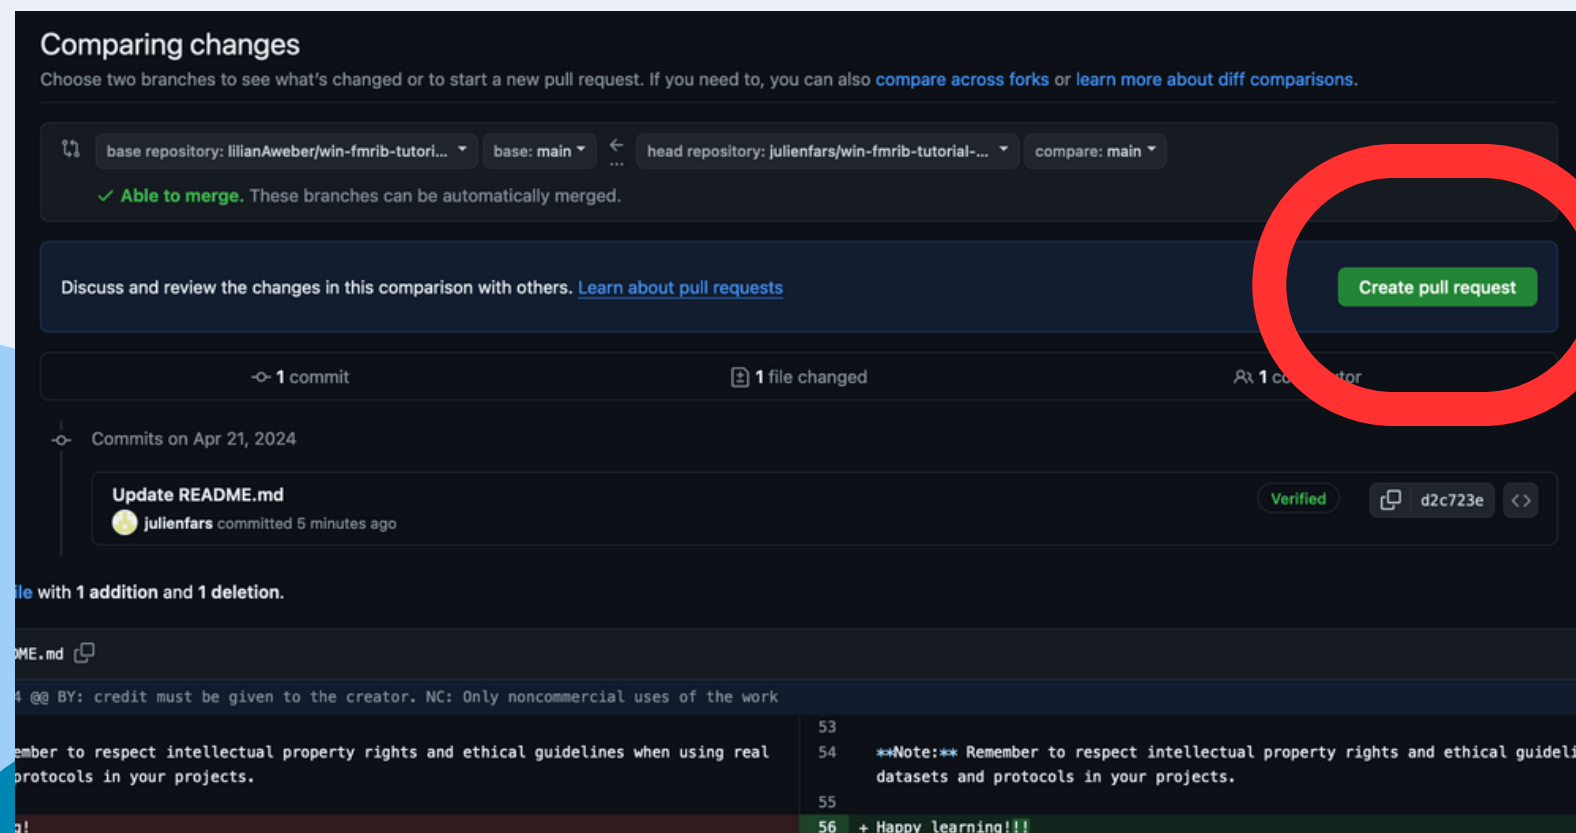

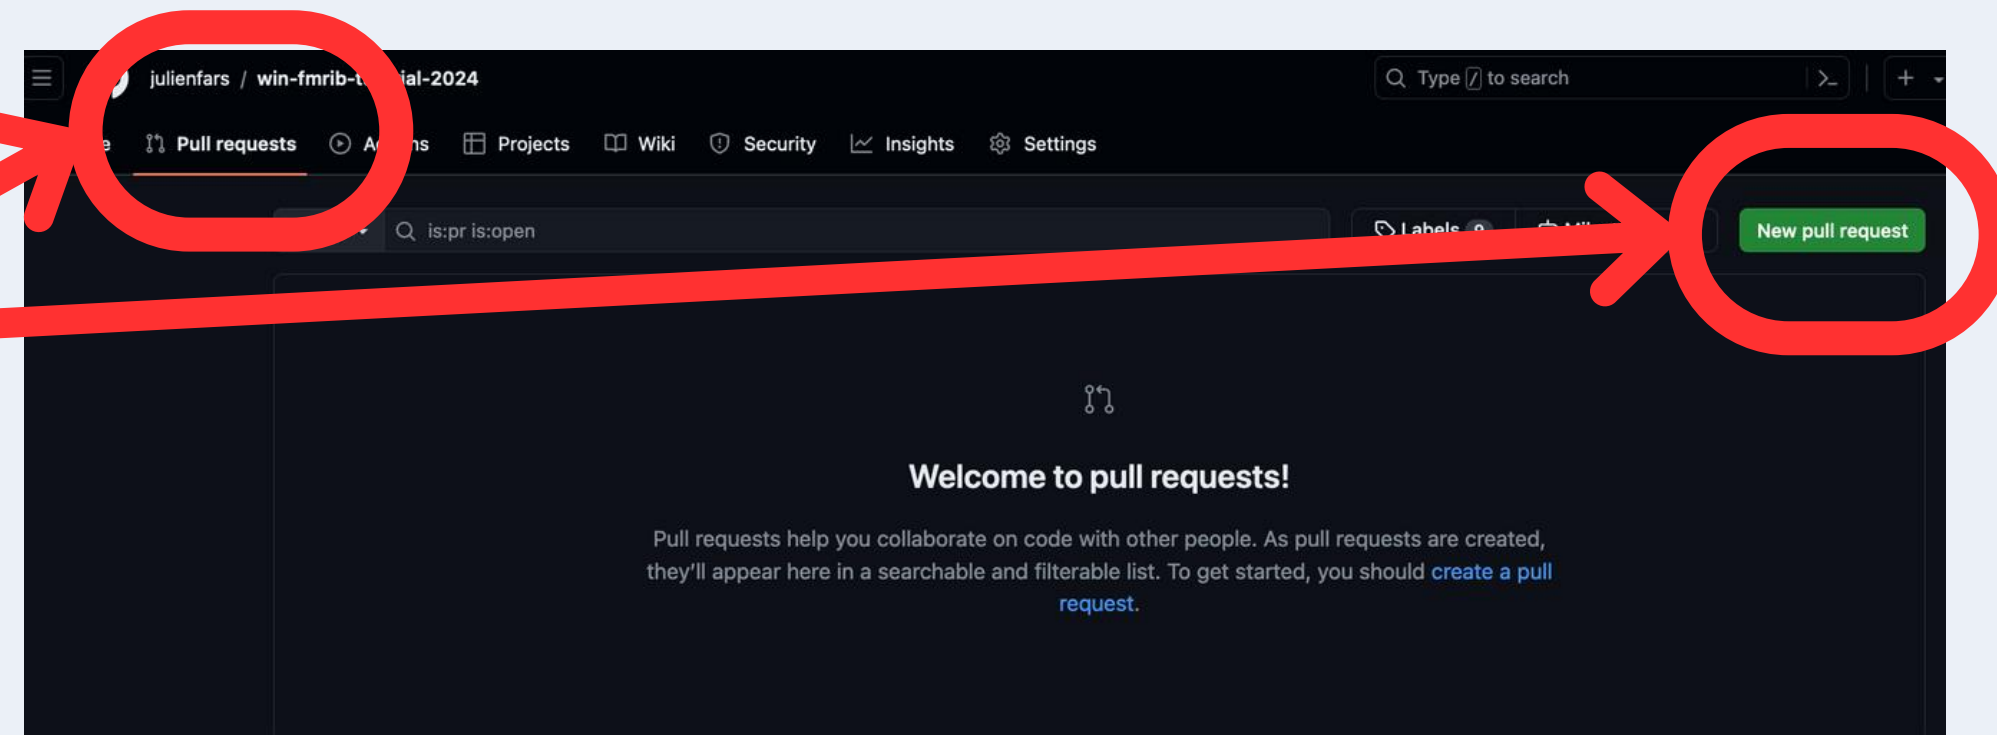

- after reviewing your changes, press 'stage changes'
- then add a commit message and press commit
- Finally, press 'push' to commit the changes on the online repository

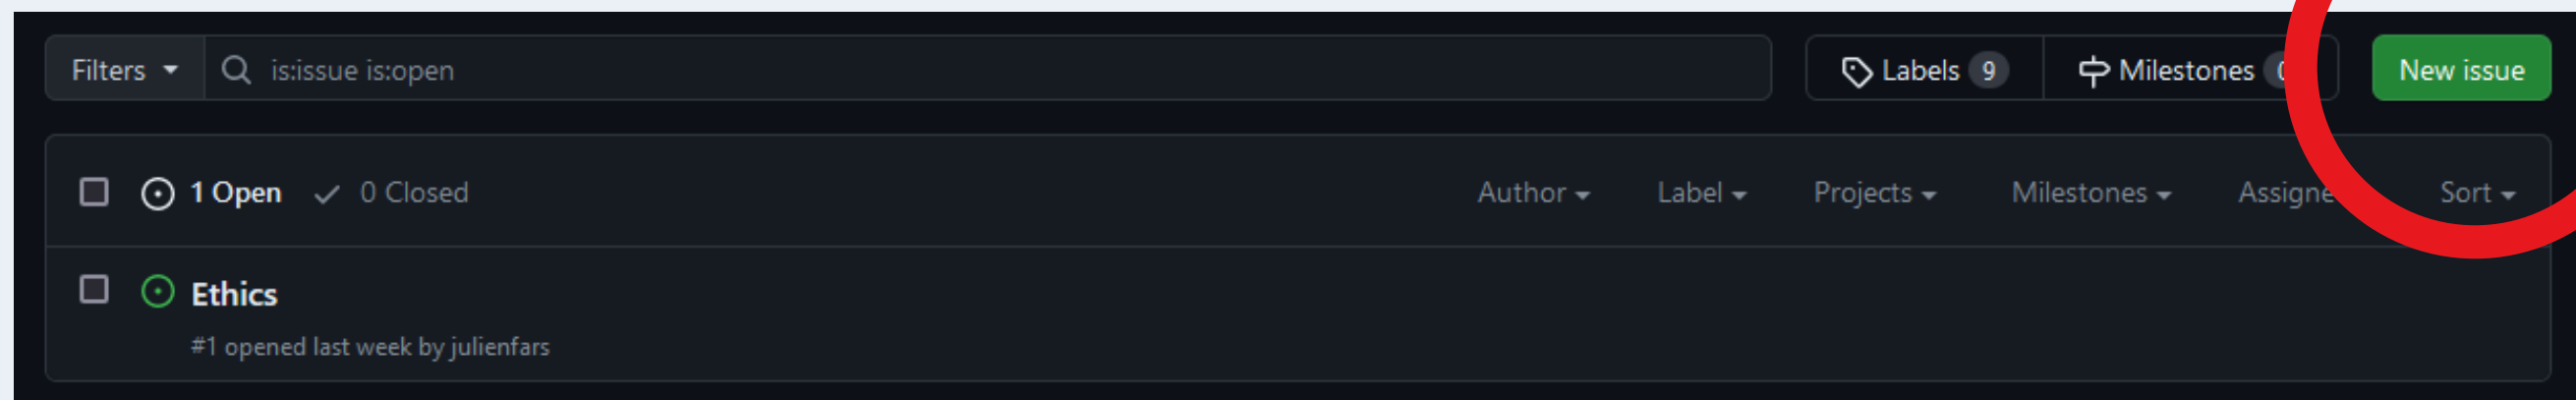

MERGE REQUEST (GITHUB)

1. First, you must have applied changes to your repository.
2. Then, go to the pull requests tab, and press new pull request

3. Review the changes and if you are happy
4. press “create pull request”

CREATE AN ISSUE (GITHUB)

Add a title

Title

Add a description

Write Preview

Add your description here...

Markdown is supported Paste, drop, or click to add files

Submit new issue

Always add:

- the document with issues
- the code lines
- AS MUCH DETAILS AS POSSIBLE

Welcome to the Repository Wiki! Introduction

Welcome to the wiki page of our repository! This wiki serves as a central hub for documentation, guidelines, and resources related to our project. Whether you're a contributor, researcher, or newcomer, this wiki is designed to help you navigate and understand our project better.

About the Project

Our project aims to do a brief tutorial about Git and GitHub. The repository hosts various resources, including datasets, code files, and documentation, to support this objective.

Getting Started

To get started with our project, follow these steps: Clone the repository to your local machine using

```
git clone <repository_url>.
```

Find a page...

Always add as much pages
as necessary

CONGRATULATIONS

By now, you should be able to use the basic functionalities of Git and have learned to collaborate on GitHub.

But remember, this was only an introduction! More advanced features requires more time and learning.

Also, most of the features you encountered in this tutorial/practical can be applied on your institution's GitLab! (e.g. WIN GitLab)

Any questions?
